

Kiln, in one page

A visual builder for WordPress that bakes your design into plain HTML and CSS.

What makes it different

- The canvas IS the page: same code paints the editor and the storefront.
- Documents are baked at publish. No runtime, no extra requests.
- Every module works without JavaScript first, then gets better with it.
- 1,800+ Google Fonts and 2,000+ commercial-use icons built in.
- Forms are stored before they are sent: nothing gets lost.

This PDF is itself a demo of the PDF viewer module.
